

# Fresh Deciduous Fruit (Apples, Grapes, & Pears): World Markets and Trade

**World Apple and Pear Trade Virtually Unchanged from Previous Year, While Grapes Expected to Gain**

## APPLES

### **Both World Production and Trade Estimates Revised Upward**

The world production estimate for 2010/11 is revised upward 4 percent to 61.9 million tons from the December forecast due mainly to expected record production in China and Chile. The global export estimate is raised 7 percent to 5.2 million tons due to stronger than anticipated demand, primarily from Mexico, Canada, Indonesia, and Saudi Arabia. Compared to the previous year, the production and export estimates are down marginally from last year's records. U.S. estimated production is relatively unchanged, while exports are higher.

### **2010/11 Revision Highlights**

- China's production estimate is revised upward 10 percent to a record 33.0 million tons resulting from favorable weather in key producing provinces. Higher consumption is expected to absorb the additional production at the expense of exports.
- Despite a smaller crop, the EU's exports are raised 12 percent to 1.2 million tons on greater demand from Russia. Exports are expected to benefit at the expense of consumption.

- Chile's production estimate is revised upward 15 percent to a record 1.5 million tons attributed to better than expected growing conditions. Exports are boosted almost 20 percent to 840,000 tons due to higher production and increased demand from key markets, such as the EU, Colombia, and Saudi Arabia.
- U.S. exports are estimated up 8 percent to a record 810,000 tons due to stronger than expected demand from Mexico (despite the 20 percent retaliatory tariff imposed in 2010 related to the trucking issue), Hong Kong, and India. U.S. imports are trimmed 5 percent to 180,000 tons on ample domestic supplies.
- Despite lower production, Argentina's exports are estimated to rise 10 percent to 230,000 tons because of expanded demand from its top markets (the EU, Brazil, and Russia). While exports are expected to expand, consumption is forecast to contract.

## **GRAPES**

### **Record Production; Trade Stable**

The global production estimate is virtually unchanged from the record December forecast at 15.9 million tons, but up 3 percent from the previous year. The world export estimate is increased 2 percent to 2.4 million tons and up 7 percent from last year on greater demand from Hong Kong and Indonesia. U.S. production and exports are higher.

### **2010/11 Revision Highlights**

- Chile's production is raised 4 percent to a record 1.2 million tons despite inconsistent growing conditions. Exports are increased 3 percent to 835,000 tons due to greater production and demand from the EU for off-season fruit.
- U.S. production is revised upward 7 percent to 875,000 tons resulting from an increase in raisin grapes sold for fresh use. Exports reached 326,200 tons, up 9 percent on higher demand from Hong Kong and record shipments to Indonesia. Additionally, U.S. exports to Mexico are recovering due in part to lower retaliatory tariffs, which were reduced from the original 45 percent to 20 percent in 2010. U.S. imports finished at 580,000 tons (5 percent less than previously forecast), influenced by abundant domestic supplies.
- South African exports are reduced 10 percent to 235,000 tons as a result of lower production and weak demand from the EU due in part to the higher Rand.

## **PEARS**

### **Production Raised; Trade Up Moderately**

The world production estimate is revised upward 11 percent to a record 20.6 million tons and slightly higher than the previous year due mainly to higher than expected production in China and Chile. The global export estimate is raised 3 percent to 1.7 million tons on expanded import demand from Brazil, Indonesia, and Malaysia, but marginally lower than last year's record. U.S. production and exports are revised downward.

### **2010/11 Revision Highlights**

- China's production estimate is increased 15 percent to a record 15.0 million tons attributed to favorable weather in key producing provinces.
- The U.S. production estimate is lowered 5 percent to 732,000 tons caused by cold, wet weather in major producing states. Exports are revised downward 3 percent to 146,000 tons on lower production and weak demand from Canada, Brazil, and Mexico (resulting in part from the 20 percent retaliatory tariff).
- The production estimate for Chile is raised 12 percent to a record 282,000 tons caused by good growing conditions. Exports are revised upward 17 percent to 129,000 tons as a result of larger production and stronger demand from the EU and the United States for off-season fruit.
- Brazil's imports are revised upward 7 percent to 160,000 tons as a result of lower supplies and higher demand for Argentine fruit.
- Indonesia's imports are raised 25 percent to a record 115,000 tons due to strong demand for Chinese product.
- Malaysia's imports are increased 23 percent to 43,000 tons on strong demand for South African and Korean fruit.

## Apples: Production, Supply, and Distribution in Selected Countries (Continued)

Metric Tons

Country Mktg Year	Production	Imports	Total Supply	Fresh Dom. Consumption	Exports	Total Distribution
-------------------	------------	---------	--------------	------------------------	---------	--------------------

Note: From 1994, the United States and Mexico are on a Aug-July marketing year. All other Northern Hemisphere countries are on a July-June marketing year. Southern hemisphere countries are on a calendar year indicated as the second year of the split year. Imports and exports will not equal due to statistical discrepancies.

Note: From 1994, the United States and Mexico are on a May-April marketing year. All other Northern Hemisphere countries are on a June-May marketing year. Southern Hemisphere countries are on a calendar year indicated as the second year of the split year. Imports and exports will not equal due to statistical discrepancies. Production has been adjusted to reflect grapes for fresh-market consumption only. Any comparison with previous years and reports should take this into account.
